

What is a knee scooter?

A knee scooter is an alternative to crutches. It is used by people who cannot put weight on a foot or ankle due to surgery, injury or illness. Our knee scooters have a comfortable foam pad for the knee leaving your other leg free to propel you forward or backward.

The knee scooter is a unique foot powered scooter that is lightweight, portable and very maneuverable.

Why Use a Knee Scooter?

- Balanced and stable mobility
- Excellent body support
- Eliminates wrist injuries
- Eliminates underarm and shoulder stress
- Ease of movement
- Speeds the healing process

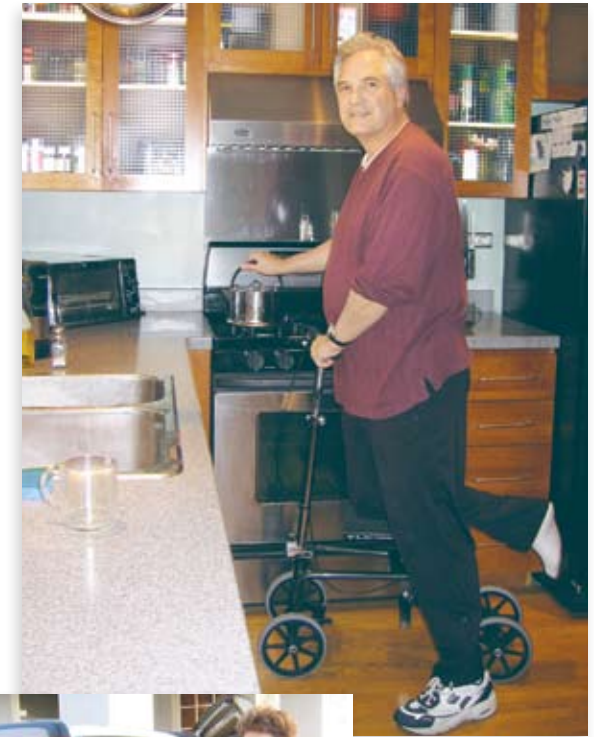

When should a knee scooter be used and for how long?

Surgeons typically recommend 6 to 12 weeks of non weight bearing activity on a foot and ankle after surgery. We suggest having our knee scooter delivered prior to your procedure. Consult with your physician on the length of time required. For long-term use, consider the purchase of a knee scooter.

Who should use a knee scooter?

- People with foot or ankle injuries, surgeries
- People who must be non-weight bearing on one ankle or foot
- People with:
 - fractures, dislocations, sprained ankles, heel spurs, arthritis*
 - diabetic ulcers, infections*
 - Charcot joint disease*
 - ruptured tendons*
 - surgical procedures on foot or ankle*
 - neuromuscular problems*
